

Download Clearcutting; A View From The Top

Clearcutting, or clearfelling, is a method of harvesting that removes essentially all the standing trees in a selected area. Depending on management objectives, a clearcut may or may not have reserve trees left to attain goals other than regeneration, including wildlife habitat management, mitigation of potential erosion or water quality concerns. ...Timelapse is optimized for interactive exploration on desktop browsers. For the full interactive experience, view this page on desktop. Situations where the top of the tree being measured is above eye level and the base of the tree being measured is below eye level is the most common situation encountered in the field. Seventy-five years ago, nearly 120,000 Americans were incarcerated because of their Japanese roots after the bombing of Pearl Harbor. More than 10,000 were forced to live in the hastily built ...
