

Download Data For Decisions: Information Strategies For Policymakers

Lincoln Park Strategies is a full-service analytic research firm that partners with corporate, non-profit, and political clients around the globe to meet all of their research and data needs. We continue to transform and expand the way we collect and analyze data for our clients. All of our quantitative Results from the Employee Viewpoint Survey demonstrate the importance of the employee's perspective about how management decisions and actions regarding employee development, performance appraisals and rewards must be fair and consistent. The Institute for Health Metrics and Evaluation (IHME) is an independent population health research center at UW Medicine, part of the University of Washington, that provides rigorous and comparable measurement of the world's most important health problems and evaluates the strategies used to address them. IHME makes this information freely available so that policymakers have the evidence they need. Data (ISSN 2306-5729) is a peer-reviewed open access journal on data in science, with the aim of enhancing data transparency and reusability. The journal publishes in two sections: a section on the collection, treatment and analysis methods of data in science; a section publishing descriptions of scientific and scholarly datasets (one dataset per paper).
