

# Download General Histology Of The Mammal An Atlas For Students Of Medicine And Biology

Parasites and Pets: A Veterinary Nursing Guide. by Hany M. Elsheikha, Ian Wright, John McGarry January 2018 This book, primarily focussing on parasitic diseases of cats and dogs, is designed specifically for veterinary nurses and students and adopts an enquiry based approach essential for consolidating knowledge and a deep practical understanding of this important subject. This is a good beginning mammalian guide for students, although the pictures could use clarity, as at times you cannot distinguish what part of the cat you are viewing in the text. A mammary gland is an exocrine gland in mammals that produces milk to feed young offspring. Mammals get their name from the Latin word mamma, "breast". The mammary glands are arranged in organs such as the breasts in primates (for example, humans and chimpanzees), the udder in ruminants (for example, cows, goats, and deer), and the dugs of other animals (for example, dogs and cats). The clitoris contains external and internal components. It consists of the glans, the body (which is composed of two erectile structures known as the corpora cavernosa), and two crura ("legs"). It has a hood formed by the labia minora (inner lips). It also has vestibular or clitoral bulbs. The frenulum of clitoris is a frenulum on the under-surface of the glans and is created by the two medial ...
